

TRAINING PROGRAMME

Blockchain for Business

Understand blockchain and decide where it creates business value

12 HOURS

FOR Managers, consultants and IT professionals evaluating blockchain projects

Mohamed Aziz BEN HAHHA

mohamedazizbenhaha.netlify.app

Overview

This workshop explains what a blockchain is and how to decide whether a business process needs one. Participants learn where blockchain comes from and how shared ledgers, permissions, consensus and smart contracts work, then look at the business frictions it can remove and at real use cases in finance, trade, insurance and supply chains, including the cases where a conventional database is the better choice. The workshop closes with a final project in which each team assesses a business process and designs the network it would need.

At a glance

#	PHASE	FOCUS	HOURS
01	Blockchain Fundamentals	Origins, Bitcoin, distributed ledgers, consensus, smart contracts	3 h
02	Business Value & Use Cases	Information, interaction and innovation frictions, sector use cases, when not to use it	3 h
03	Final Project	A use-case assessment, presented to the group	3 h
	Buffer	Catch-up, revision, extra lab time	3 h
	Total		12 h

Key facts

AUDIENCE	Managers, consultants and IT professionals evaluating blockchain projects
PREREQUISITES	None. No programming or cryptography background needed
DURATION	12 h: 9 h of chapters + 3 h buffer
FORMAT	Workshop: short lectures, each followed by group exercises on business cases
LAB ENVIRONMENT	One laptop per participant with a browser; a public block explorer and a trainer demonstration of a permissioned network (Hyperledger Fabric test network); no account or cost
ASSESSMENT	Group exercises reviewed in each phase and a final use-case assessment presented to the group; certificate of completion for participants who complete both
OUTCOME	Participants can explain how a blockchain works, judge whether a business process needs one, and outline the participants, permissions and smart contracts of a suitable network

PHASE 01

3 H

Blockchain Fundamentals

Participants learn where blockchain comes from and how it works: shared ledgers, permissions, consensus mechanisms, smart contracts and the roles of the participants. Validated exercise: a transaction traced in a public block explorer, and the difference between a public and a permissioned network explained by each group.

#	CHAPTER	CONTENT	FORMAT	HOURS
1.1	Fundamentals	Origins, Bitcoin, distributed ledgers	Lecture + Workshop	1.5 h
1.2	How It Works	Shared ledger, permissions, consensus, smart contracts, participants	Lecture + Workshop	1.5 h

PHASE 02

3 H

Business Value & Use Cases

Participants analyse the business frictions a shared ledger can remove, study use cases in finance, trade, insurance and supply chains, and learn the questions that show when a conventional database is the better choice. Validated exercise: a decision checklist applied to three proposed projects.

#	CHAPTER	CONTENT	FORMAT	HOURS
2.1	Business Value	Information, interaction and innovation frictions	Lecture + Workshop	1.5 h
2.2	Use Cases	Finance, trade, insurance, supply chain; when not to use blockchain, including discontinued consortia (TradeLens, we.trade)	Lecture + Workshop	1.5 h

PHASE 03

3 H

Final Project

Teams of two or three choose a business process, decide whether it needs a blockchain using the workshop's checklist, and present their recommendation as they would to a steering committee.

#	CHAPTER	CONTENT	FORMAT	HOURS
3.1	Assess & Design	Pick a business process, decide blockchain or not, design the network: participants, permissions, smart contracts	Project	1.5 h
3.2	Present & Review	Present the recommendation and the network design; questions and feedback	Project	1.5 h

FINAL PROJECT**Blockchain Use-Case Assessment**

A business process assessed against the workshop's checklist, with a reasoned decision for or against blockchain and, where it fits, the design of the network: participants, permissions and smart contracts.

STACK Decision checklist, network design canvas, public block explorer

DELIVERABLE Assessment and recommendation, network design, presentation
