

TRAINING PROGRAMME

Azure Administrator

Manage identities, governance, networks, storage, compute and monitoring in Microsoft Azure

42 HOURS

FOR System administrators and IT engineers who run Microsoft Azure environments

PREPARES FOR Microsoft Certified: Azure Administrator Associate (AZ-104)

Mohamed Aziz BEN HAHHA

mohamedazizbenhaha.netlify.app

Overview

This programme teaches participants to administer Microsoft Azure and prepares the AZ-104 exam for the Azure Administrator Associate certification. They organise subscriptions and resources, manage identities in Microsoft Entra ID, govern access and cost with RBAC, Azure Policy and tags, build virtual networks with secure access, DNS and load balancing, manage storage accounts, deploy virtual machines with ARM templates and Bicep, run web apps and containers, and monitor and protect workloads with Azure Monitor, Azure Backup and Site Recovery. Every chapter ends with a lab in the portal, CLI or PowerShell, exam practice closes the content, and the programme ends with a final project: a company's Azure environment built and presented by each team.

At a glance

#	PHASE	FOCUS	HOURS
01	Identity & Governance	Subscriptions and Resource Manager, Microsoft Entra ID, RBAC, Azure Policy, cost	9 h
02	Networking	VNets, peering, routes, NSGs, Bastion, private endpoints, DNS, load balancing	6 h
03	Storage & Compute	Storage accounts, virtual machines and scale sets, Bicep, App Service, containers	9 h
04	Monitoring, Backup & Exam Preparation	Azure Monitor, Log Analytics, Network Watcher, Azure Backup, Site Recovery, AZ-104	6 h
05	Final Project	A company's Azure environment, presented to the group	6 h
	Buffer	Catch-up, revision, extra lab time	6 h
	Total		42 h

Key facts

AUDIENCE	System administrators and IT engineers who run Microsoft Azure environments
PREREQUISITES	None in Azure. Working knowledge of operating systems, IP networking and the command line is expected
DURATION	42 h: 36 h of chapters + 6 h buffer
FORMAT	Short lectures followed by guided labs in the Azure portal, Azure CLI and PowerShell; exam practice
LAB ENVIRONMENT	One laptop per participant (browser, Azure CLI, PowerShell, VS Code with Bicep); per team, an Azure subscription in its own Microsoft Entra test tenant with an Entra ID P2 trial and a budget alert, provided by the organiser; resource groups deleted after each lab to control cost
ASSESSMENT	A lab validated at the end of each phase, practice exam questions and a final project presented to the group; certificate of completion for participants who complete the labs and the project
OUTCOME	Participants can build and govern an Azure environment with identities, policies, networks, storage, virtual machines, monitoring and backup, and sit the AZ-104 exam

PHASE 01

9 H

Identity & Governance

Participants learn how Azure is organised and administered from the portal, CLI and PowerShell, manage users, groups and external identities in Microsoft Entra ID, then govern access and spending with RBAC, Azure Policy, management groups, tags, locks and cost management. Validated lab: a management group hierarchy that applies the Allowed locations policy, a team has Contributor rights on its resource group only, and a budget raises an alert.

#	CHAPTER	CONTENT	FORMAT	HOURS
1.1	Azure Foundations	Regions, subscriptions, resource groups, Azure Resource Manager, portal, CLI and PowerShell	Lecture + Lab	3 h
1.2	Identity	Microsoft Entra ID users and groups, licences, external users, self-service password reset	Lecture + Lab	3 h
1.3	Governance & Cost	RBAC, Azure Policy, management groups, tags, locks, cost management, Azure Advisor, moving resources	Lecture + Lab	3 h

PHASE 02

6 H

Networking

Participants build and connect virtual networks, filter traffic with network and application security groups, reach machines securely through Azure Bastion and services through private endpoints, resolve names with Azure DNS, and spread traffic with Azure Load Balancer and Application Gateway. Validated lab: two peered VNets where a VM without a public IP is reached only through Bastion and reads a storage account, created from a provided Bicep file, through a private endpoint.

#	CHAPTER	CONTENT	FORMAT	HOURS
2.1	Virtual Networks	VNets, subnets, peering, user-defined routes, NSGs and ASGs	Lecture + Lab	3 h
2.2	Secure Access & DNS	Azure Bastion, service and private endpoints, Azure DNS	Lecture + Lab	1.5 h
2.3	Load Balancing	Azure Load Balancer, Application Gateway	Lecture + Lab	1.5 h

PHASE 03

9 H

Storage & Compute

Participants create and secure storage accounts with the right redundancy and lifecycle rules, deploy virtual machines and scale sets across availability zones with ARM templates and Bicep, then run web apps on App Service with deployment slots and containers on Container Instances and Container Apps. Validated lab: a zone-redundant VM scale set deployed from a Bicep file, and a web app swapped from its staging slot to production.

#	CHAPTER	CONTENT	FORMAT	HOURS
3.1	Storage	Storage accounts, redundancy, encryption; access keys, SAS and stored access policies, firewalls, identity-based access to Azure Files; Blob tiers, soft delete, versioning, lifecycle management; AzCopy	Lecture + Lab	3 h
3.2	Virtual Machines	VMs, disks and encryption at host, resizing and moving VMs, availability sets and zones, scale sets; ARM templates and Bicep: deploy, export, convert	Lecture + Lab	3 h
3.3	App Service & Containers	App Service plans, scaling, TLS certificates, custom domains, backup, deployment slots; Azure Container Registry, Container Instances, Container Apps	Lecture + Lab	3 h

PHASE 04

6 H

Monitoring, Backup & Exam Preparation

Participants collect metrics and logs with Azure Monitor and Log Analytics, alert on them, diagnose connectivity with Network Watcher, protect workloads with Azure Backup and Site Recovery, then practise AZ-104 questions. Validated lab: a deleted file recovered from an Azure Backup recovery point of a VM, and an alert raised from a KQL query in Log Analytics.

#	CHAPTER	CONTENT	FORMAT	HOURS
4.1	Monitoring & Backup	Azure Monitor, Log Analytics and KQL, alerts and action groups, VM and network insights, Network Watcher and Connection Monitor, Recovery Services and Backup vaults, Site Recovery	Lecture + Lab	3 h
4.2	AZ-104 Preparation	Practice questions and review	Lecture + Workshop	3 h

PHASE 05

6 H

Final Project

Teams of two or three build the Azure environment of a company from a written brief, reusing the phase labs, then present it as they would to an IT manager.

#	CHAPTER	CONTENT	FORMAT	HOURS
5.1	Brief & Build	Read the brief, then set up Entra ID groups and RBAC, policies, hub-and-spoke VNets with NSGs, load-balanced VMs and storage, deployed with Bicep where possible	Project	3 h
5.2	Monitor, Protect & Document	Monitoring, alerts and backup; architecture diagram and administration guide	Project	1.5 h
5.3	Demo & Review	Live demo with a restore, cleanup; questions and feedback	Project	1.5 h

FINAL PROJECT

A Company's Azure Environment

The Azure environment of a company: Entra ID groups with RBAC, policies that enforce its rules, hub-and-spoke virtual networks with NSGs, load-balanced virtual machines, storage, monitoring with alerts and a tested backup.

STACK Azure: Microsoft Entra ID, RBAC, Azure Policy, VNets, NSGs, Load Balancer, Bastion, virtual machines, storage accounts, Azure Monitor, Log Analytics, Azure Backup, Bicep

DELIVERABLE Working environment, Bicep files, architecture diagram, administration guide, live demo
